Postura — Pre-Scan Questionnaires

Every question the app asks a user **before** the camera posture scan begins. Compiled from the app source on 06 October 2026. Replaces the 01 October 2026 version.

What changed since 01 October 2026
• New first question: **“Can a photo be taken from the front view?”** Yes → armrest width and sideways wrist deviation are measured from the front photo. No → the front photo is skipped and those two are asked as questions instead. Each scan uses exactly one source, never both.
• New question: **“Your elbows/forearms are supported by the armrests or work surface”**. No → ROSA armrest score 2 (elbows unsupported).
• Now ROSA inputs: **lumbar support** (No → backrest score 2) and **feet flat** (No → seat-height score 3, no foot contact).
• Corrected from the previous version: “Monitor position is adjustable”, “Top of the monitor relative to eye level”, “Mouse position is adjustable” and “Mouse is positioned far enough away that you have to reach for it” are asked but do **not** change the ROSA score. They feed the Action Report only. Monitor height and mouse reach are scored from the camera.

Where these sit in the flow

Seven screens run in a fixed order. The camera scan is the eighth step, so everything below is answered first. The order is defined in `lib/routes.dart`.

#	Screen	Purpose	Feeds
1	Select Body Region	Where it hurts	Context for the ergonomist
2	Pain Intensity	How much, per region	Context
3	Pain Duration	How long, per region	Exercise engine
4	Work Ability & Recovery Outlook	Psychosocial risk (yellow flags)	Risk scoring
5	Red Flag Screening	Safety triage	Referral gate
6	Workstation Questionnaire	What the camera cannot see	ROSA score
7	Optional Symptoms	Secondary symptoms	Context
8	Camera Guide → **scan**	The scan itself	—

*Note on scoring: pain, symptoms and duration of pain are recorded for context and for the exercise engine — they are **not** inputs to the ROSA score. ROSA is calculated from the pose geometry captured by the camera plus the workstation checklist (section 6).*

1. Select Body Region

“Please select a body region.” Multi-select; drives sections 2 and 3.

Spine & trunk	Upper limb	Lower limb
Neck Upper Back Lower Back	Left / Right Shoulder Left / Right Elbow Left / Right Wrist	Left / Right Hip Left / Right Knee

2. Pain Intensity

“Rate the pain intensity for each region.” Asked once per region selected in section 1.

• Scale **1 – 10** (slider, 9 divisions), displayed as “n / 10”.

3. Pain Duration

“Select the duration of your pain.” Asked once per region. All fields are required before continuing.

Options
No pain
Less than 1 week
1–4 weeks
6–12 weeks (subacute — kept distinct from chronic so the exercise engine can tell them apart)
1–3 months
3–6 months
More than 6 months

4. Work Ability & Recovery Outlook

Eight questions on psychosocial risk (“yellow flags”). Q1–Q6 and Q8 are **0–10** scales; Q7 is a choice. Q2, Q4, Q5 and Q8 are reverse-scored — a higher answer means *lower* risk. Scoring happens server-side; the app only carries the raw values.

#	Question	Scale anchors
1	How large is the risk that your current pain may become persistent or long-term?	0 → 10 (*Very large risk*)
2	What are the chances you will be working your normal duties in 3 months?	0 → 10 (*Very large chance*) · reverse
3	An increase in pain is an indication that I should stop what I am doing until the pain decreases.	*Completely disagree → Completely agree*
4	I can do light work (or normal light duties) for an hour.	*Cannot do it because of the pain → Can do it without the pain being a problem* · reverse
5	I can sleep at night.	*Cannot do it because of the pain → Can do it without the pain being a problem* · reverse
6	How much has your pain reduced your productivity or ability to work at full capacity in the past week?	0 → 10 (*Extremely — unable to work normally*)
7	In the last 12 months, how many work days have you missed because of similar pain or musculoskeletal problems?	0 days · 1–5 · 6–15 · 16–30 · More than 30
8	I feel I can get support or make reasonable adjustments at work if needed because of this pain.	0 → 10 · reverse

5. Red Flag Screening — “A Few Safety Questions”

Shown to the user as: *“These help us make sure exercise is a safe option for you right now. Answer honestly — a ‘Yes’ just means we point you to a healthcare professional instead.”*

All seven are Yes / No. Any **Yes** routes the user to a healthcare professional rather than to exercise recommendations.

#	Question
1	New loss of bladder or bowel control
2	Numbness in the saddle area (inner thighs, groin, or genitals)
3	New or worsening weakness in your legs or arms
4	A significant recent trauma (e.g. a fall, accident, or blow to your back)
5	Fever, a recent infection, or a weakened immune system along with back pain
6	A history of cancer, with new or worsening back/spine pain
7	Severe pain that doesn’t ease up, especially at night

7. Optional Symptoms

“Select your optional symptoms.” Multi-select, all optional, recorded for context only — not used in scoring.

Numbness or tingling Stiffness Swelling Reduced range of motion	Headaches Eye strain Fatigue

6. Workstation Questionnaire

The ROSA checklist items the camera cannot observe, in on-screen order. The **ROSA effect** column shows exactly what each answer does to the score. “Area +1” adds a point to that ROSA area. “Base score” answers set the official ROSA tier the camera can’t see; they can only raise the camera’s score, never lower it, so nothing is counted twice.

Front Photo

Question	Answer	ROSA effect
Can a photo be taken from the front view?	Yes / No	Chooses the source for armrest width and wrist deviation. **Yes** → measured from the front photo (elbow abduction ≥ 20° / wrist deviation ≥ 15°). **No** → front photo skipped; the two questions marked below are asked instead.

Chair

Question	Answer	ROSA effect
Chair height is adjustable	Yes / No	**No** → chair-height area +1
Enough room under the desk to cross your legs	Yes / No	**No** → chair-height area +1
Seat pan depth (space behind your knees)	~3 in (OK) / Too long / Too short	**Too long** or **Too short** → seat-pan base score 2
Seat pan depth is adjustable	Yes / No	**No** → seat-pan area +1
Armrests are adjustable	Yes / No	**No** → armrest area +1
Armrest surface is hard or damaged	Yes / No	**Yes** → armrest area +1
Your elbows/forearms are supported by the armrests or work surface **(new)**	Yes / No	**No** → armrest base score 2 (elbows unsupported)
Armrests are too wide apart Shown only if the front photo question is answered No	Yes / No	**Yes** → armrest area +1
Backrest is adjustable	Yes / No	**No** → back-support area +1
Chair has a usable backrest that supports your back while working	Yes / No	**No** → backrest base score 2
Chair provides lumbar support that contacts your lower back while sitting normally	Yes / No	**No** → backrest base score 2 **(now scored)**
Both feet are flat on the floor or a footrest while typing	Yes / No	**No** → seat-height base score 3, no foot contact **(now scored)**
Desk/work surface is too high (shoulders shrug)	Yes / No	**Yes** → back-support area +1

Monitor & Telephone

Question	Answer	ROSA effect
Monitor position is adjustable	Yes / No	Not scored — Action Report only
Top of the monitor relative to eye level	Below / At eye level / Above	Not scored — Action Report only Monitor height is scored from the camera (neck posture)
You twist your neck more than 30° to view the monitor	Yes / No	**Yes** → monitor area +1
Monitor is farther than arm's length away (>75cm)	Yes / No	**Yes** → monitor area +1
There is glare on the screen	Yes / No	**Yes** → monitor area +1
You have a document holder for paper references	Yes / No	**No** → monitor area +1
Desk phone usage	Don't use / Headset/1-hand / Reach far	Phone base score 0 / 1 / 2
You cradle the phone between ear and shoulder Shown only if desk phone usage is not "Don't use"	Yes / No	**Yes** → phone area +2
You have a hands-free option (headset/speakerphone) Shown only if desk phone usage is not "Don't use"	Yes / No	**No** → phone area +1
Do you hold/cradle the phone between your ear and shoulder during calls?	Yes / No	Not scored — Action Report only Supplemental CPE finding, see below
Do you have a hands-free option available for phone calls (headset, speakerphone, or similar)?	Yes / No	Not scored — Action Report only Supplemental CPE finding, see below

Mouse & Keyboard

Question	Answer	ROSA effect
Mouse and keyboard are on different surfaces/heights	Yes / No	**Yes** → mouse area +2
You use a pinch grip on the mouse	Yes / No	**Yes** → mouse area +1
There is a palm rest in front of the mouse	Yes / No	**Yes** → mouse area +1
Mouse position is adjustable	Yes / No	Not scored — Action Report only
Mouse is positioned far enough away that you have to reach for it	Yes / No	Not scored — Action Report only Mouse reach is scored from the camera
Wrists deviate sideways while typing Shown only if the front photo question is answered No	Yes / No	**Yes** → keyboard area +1
Keyboard is too high (shoulders shrug)	Yes / No	**Yes** → keyboard area +1
You frequently reach overhead for items	Yes / No	**Yes** → keyboard area +1
Keyboard platform/tray is adjustable	Yes / No	**No** → keyboard area +1

Daily Duration

Question	Answer	ROSA effect
How long do you typically work continuously at this desk?	< 30 min / 30-60 min / > 1 hour	–1 / 0 / +1, applied to the chair score and to the phone, monitor, mouse and keyboard areas

What the camera measures

Every scan takes three side photos. The front photo follows only when the first question is answered Yes.

Measurement	Photo	ROSA base score
Knee angle	Side	Seat height: <80° → 2, 80–100° → 1, 100–130° → 2, >130° → 3
Trunk lean from vertical	Side	Backrest: >28° → 2
Shoulder shrug	Side	Armrest: shrugged → 2
Neck posture	Side	Monitor: eye level → 1, too low → 2, too high → 3
Wrist extension	Side	Keyboard: extended beyond ~15° → 2
Mouse reach	Side	Mouse: reaching → 2
Elbow abduction	Front	Armrests too wide: ≥ 20° → armrest area +1
Wrist deviation	Front	Sideways deviation: ≥ 15° → keyboard area +1

Supplemental CPE Findings

*Collected but sent as a **separate payload**, so these never reach the ROSA scorer. They appear only in the Action Report.*

Question	Answer	Triggers
Employee height (asked on the scan start screen)	Centimetres	Chair / monitor recommendations
Do you hold/cradle the phone between your ear and shoulder during calls?	Yes / No	`B_PHONE_CRADLE` on Yes
Do you have a hands-free option available for phone calls?	Yes / No	`B_PHONE_HANDSFREE` on No
